

Smart Home Automation

Activities

- When the user (Multiple users) tries to manipulate the state of any of the devices in any of the rooms, he will be able to.
- When users leave the house, switch off all not mandatory devices.
- When user enters home, reactivate the previous state.
- New device can be added or an existing device can be removed (only Admin Permission).
- By evening lights will be on (default state), morning lights off (default).
- Fill water tank when the water level reaches threshold.
